

Alex Sample

Process Engineer · Continuous Improvement
Springfield · alex.sample@example.com · +1 555 0100

Professional summary

Process engineer with eight years across two manufacturing plants, focused on cycle-time reduction and supplier quality. Led the line-balancing program that cut changeover time 31% across 4 lines, and ran root-cause work on the plant's three highest-scrap part families. Comfortable owning problems end to end: data pull, shop-floor verification, countermeasure, standardization.

Core competencies

Lean manufacturing · 8D root-cause analysis · SPC · Supplier audits · Value-stream mapping · Cross-functional facilitation
· SQL & spreadsheet modelling

Professional experience

Process Engineer — Northfield Components Mar 2020 – Present

Owns CI across 4 assembly lines · 2 direct collaborators · ~\$1.2M annual savings portfolio

- Cut changeover time 31% across 4 lines via a line-balancing program adopted plant-wide.
- Reduced scrap on the top part family from 4.1% to 1.6% in nine months through 8D-driven supplier countermeasures.
- Built the plant's first SPC dashboard; supervisors now catch drift in hours instead of weekly reviews.

Quality Engineer — Harbor Precision Jun 2016 – Feb 2020

Supplier quality for 12 machining suppliers · PPAP ownership

- Took 12 suppliers through PPAP with zero launch delays over three product launches.
- Closed a recurring dimensional defect that had cost ~\$180K/yr; fix later adopted by two sister plants.

Education

B.Sc. Mechanical Engineering — State University · 2012 – 2016
